

iSectors® Global Balanced Allocation

Portfolio Description

The objective of the iSectors® Global Balanced Allocation model is to provide for longer term growth of capital and modest income. The equity portion of the portfolio (approximately 50%) is allocated among a diversified selection of domestic and international low-cost equity index-based exchange-traded funds (ETFs). In addition, fundamentally-weighted, dividend-focused index ETFs are used in an effort to enhance return and reduce volatility. The remaining 50% of the allocation is invested in fixed income ETFs. The core of the fixed income portion of the portfolio holds domestic and international government, investment grade corporate, and mortgage-backed bonds with various maturities. The remainder of the fixed income portfolio is invested in ETFs that hold non-investment grade, fixed income securities and high-yield bonds in an effort to add diversification and the potential for increased returns. Two percent of the portfolio is invested in cash and/or cash equivalents to provide liquidity and facilitate transactions. The portfolio is intended for investors with a moderate risk utility and an intermediate time horizon.
