iSectors® Global Growth Allocation

Portfolio Description

The objective of iSectors® Global Growth Allocation model is to provide capital growth from equities with a 20-25% allocation to fixed income to reduce risk. The equity portion of the portfolio is allocated among a diversified basket of domestic and international low-cost equity index-based exchange-traded funds (ETFs). In addition, fundamentally-weighted, dividend-focused index ETFs are used in an effort to enhance return and reduce volatility. The fixed income portion of the portfolio is diversified across a range of low-cost exchange-traded funds ETFs. The core of the fixed income portion of the portfolio holds domestic and international government, investment grade corporate, and mortgage-backed bonds with various maturities. The remainder of the fixed income portfolio is invested in ETFs that hold non-investment grade fixed income securities and high-yield bonds in an effort to add diversification and the potential for increased returns. The portfolio is intended for investors with a somewhat aggressive risk utility who are willing to accept greater volatility in exchange for potentially greater returns and a long-term time horizon.
